FAIL Forced reflow

A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about forced reflows and possible mitigations.

FAIL LCP breakdown

Each subpart has specific improvement strategies. Ideally, most of the LCP time should be spent on loading the resources, not within delays.

FAIL LCP request discovery

Optimize LCP by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

FAIL Network dependency tree

Avoid chaining critical requests by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

FAIL Reduce unused CSS ~22.8 KB savings

Est savings of 23 KiB

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. Learn how to reduce unused CSS.

URL	Transfer Size	Est Savings
https://dragoncandy.io/assets/index-B_TbmXh0.css	24.5 KB	22.8 KB

FAIL Reduce unused JavaScript ~110.9 KB savings

Est savings of 111 KiB

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. Learn how to reduce unused JavaScript.

URL	Transfer Size	Est Savings
https://dragoncandy.io/assets/index-Bs5qwSTX.js	100.4 KB	63.6 KB
https://dragoncandy.io/assets/vendor-motion-D9irQEn5.js	41.5 KB	25.1 KB
https://dragoncandy.io/assets/vendor-supabase-tvB9dFZN.js	30.4 KB	22.1 KB

NEEDS IMPROVEMENT (5)

WARN Speed Index

weight 10

5.4 s

Speed Index shows how quickly the contents of a page are visibly populated. Learn more about the Speed Index metric.

WARN Improve image delivery

Est savings of 156 KiB

Reducing the download time of images can improve the perceived load time of the page and LCP. Learn more about optimizing image size

node	URL	Resource Size	Est Savings
	https://dragoncandy.io/assets/Transparent_DragonCandy_logo-DmUJH8WS.webp	69.9 KB	64.1 KB
	https://zocahiffooqdybdhguqv.supabase.co/storage/v1/render/image/public/profile-assets/478c1421-44df-44a5-989f	75.5 KB	58.8 KB

Accessibility 96

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

FAILED (1)

FAIL Background and foreground colors do not have a sufficient contrast ratio.

weight 7

Low-contrast text is difficult or impossible for many users to read. Learn how to provide sufficient color contrast.

Failing Elements

Benchmark index	710
Lighthouse	13.0.1

Recommendations

Concrete fixes for the issues surfaced above. Items are ordered by impact on the failing metrics for this run.

- Improve LCP (currently 4.5 s)** — preload the hero image with `<link rel="preload" as="image">`, convert oversized PNGs (notably `Donny_icon.png` 1.3 MB) to WebP/AVIF, and ensure the LCP image is **not** `loading="lazy"`.
- Improve FCP (currently 3.3 s)** — self-host fonts and use `font-display: swap`, preconnect to required origins, and lazy-load the eager page imports in `src/App.tsx` (`Index`, `NotFound`, `AuthPage`).
- Improve Speed Index (currently 5.4 s)** — defer non-critical JS, ship critical CSS inline, and split large vendor chunks via `build.rollupOptions.output.manualChunks` in `vite.config.ts`.
- Reduce TTI (currently 4.5 s)** — same toolbox as TBT plus reducing the size of the main JS bundle so React can mount sooner.

5. **Strip ~110.9 KB of unused JavaScript** — biggest contributors are the main bundle, `vendor-motion`, and `vendor-supabase`. Use route-level `React.lazy` for every page (already done for most), add `manualChunks` in Vite to isolate framer-motion/recharts, and remove unused npm deps (`install`, `embla-carousel-react`, `sharp`).
6. **Strip ~22.8 KB of unused CSS** — Tailwind already purges unused classes via `content` in `tailwind.config.ts`. Confirm no global CSS files are loaded that aren't used (`src/App.css`, `src/index.css`).
7. **Add explicit dimensions to images** — every `<img>` should have `width` and `height` attributes (or `aspect-ratio` CSS) so the browser can reserve space and avoid layout shift.
8. **React Query tuning** — set `refetchOnWindowFocus: false` globally on the QueryClient and override per-query for live data. Replace `refetchInterval` polling on payments/applications with Supabase Realtime `postgres_changes` subscriptions.
9. **Re-run Lighthouse after each batch of fixes** — track Performance score, LCP, and TBT trend over time. Mobile testing on a throttled connection gives a more honest picture than desktop.
