SECTION 3

Executive Summary

The Problem

Today, social media posting happens entirely **outside** DragonCandy. Restaurants approve creator content in-platform, then manually re-upload it to Instagram, TikTok, and Google Business Profile. Creators cross-post deliverables by hand. Brands have zero visibility into when or where sponsored content actually goes live. The loop between content creation, approval, and publication is broken.

The Solution

Outstand.so closes the loop. With a single integration, content created and approved inside DragonCandy can be **published directly to social media** — all without leaving the platform. Donny AI orchestrates the entire process: writing captions, picking optimal posting times, and tracking performance across every channel.

Integration Partner: Outstand.so

Unified social media API covering **10 platforms**, including Instagram, TikTok, YouTube, Google Business Profile, LinkedIn, Facebook, X, Threads, Bluesky, and Pinterest.

\$0.01/post **25-tool MCP server** **White-label ready** **OAuth management**

Core Decisions

Decision	Choice	Rationale
Feature Scope	Full suite (posting, scheduling, analytics, engagement)	Complete vision for dev team, even if phased
Account Model	Each role connects own accounts	Simplest foundation; delegated access designed for future
Interaction Model	Donny-first, manual UI as fallback	Aligns with “less typing” philosophy
Rollout Strategy	Role-first (Restaurant → Creator → Brand → Cross-role)	Restaurants get value first; each phase builds on the last
Campaign Tie-in	Deep integration	Social hooks at every campaign lifecycle stage

Platform Priorities

Role	Primary Platforms	Secondary Platforms
Restaurant	Instagram, TikTok, Google Business Profile, Facebook	YouTube, Threads
Creator	Instagram, TikTok, YouTube, X	Threads, LinkedIn
Brand	Instagram, TikTok, LinkedIn, YouTube	Facebook, X

SECTION 4

Restaurant Role Strategy

"Run your restaurant's entire social media presence without leaving DragonCandy — or just tell Donny what to post."

6-Step Social Workflow

1

Connect Accounts

OAuth → Instagram, TikTok, Google Business Profile, Facebook

2

Content Sources

Own photos/videos

Creator deliverables

Donny-generated

3

Donny Creates & Schedules

Writes caption, selects hashtags, picks optimal posting time

4

Review & Approve (optional)

Content calendar preview — approve or edit before publish

5

Engage & Monitor

Donny alerts on comments/mentions, suggests replies

6

Track Performance

Unified analytics — feeds into ROI Dashboard

Campaign-Integrated Workflow

Feature Grid

Content Calendar Visual weekly/monthly view of scheduled posts across all platforms. Drag-and-drop rescheduling.	Social Analytics Engagement, reach, follower growth, best posting times. Feeds directly into existing ROI Dashboard.
Engagement Hub Unified inbox for comments and mentions across platforms. Donny suggests replies, restaurant approves.	UGC Reposting When creators tag the restaurant, Donny detects it and offers to reshare.
Google Business Sync Auto-post updates, photos, specials to GBP — critical for local search.	Donny Auto-Pilot Donny generates and schedules a weekly content plan based on menu, events, and trends.

SECTION 5

Creator Role Strategy

"Every deliverable you create on DragonCandy becomes content for your own channels too — Donny handles the cross-posting so you can focus on creating."

6-Step Social Workflow

1

Connect Accounts

OAuth → Instagram, TikTok, YouTube, X

2

Create Campaign Content

Existing DC flow — upload deliverables for campaigns

3

Donny Cross-Post Prompt

"Your reel for Sakura Sushi just got approved! Want me to post a version to your Instagram and TikTok?"

[Cross-post now](#)[Schedule](#)[Customize](#)[Skip](#)

4

Standalone Content Creation

Behind-the-scenes, portfolio highlights — Donny helps draft & schedule

5

Build Social Proof

Analytics from connected accounts auto-enhance DC profile

6

Win More Campaigns

Verified metrics → more competitive → higher rates

Creator Flywheel

More campaigns & higher rates

Feature Grid

Auto Cross-Post

When campaign content is approved, Donny offers to post a creator-branded version to their channels.

Portfolio Analytics

Real engagement data from connected accounts feeds into DC profile — verified, not self-reported.

Content Calendar

Schedule posts across personal channels. Campaign deadlines and social posts in one view.

Donny Caption Writer

Rewrites campaign captions for creator's personal voice — different tone, hashtags, CTA.

Growth Insights

Donny analyzes which campaign content performed best, recommends campaign types to apply for.

Verified Creator Badge

Connected + active social accounts earn a "Verified" badge on DC profile.

SECTION 6

Brand Role Strategy

"Sponsor a campaign and watch it go live across the restaurant's, creator's, AND your own channels — with real-time performance data flowing back to your dashboard."

6-Step Social Workflow

1

Connect Accounts

OAuth → Instagram, TikTok, LinkedIn, YouTube

2

Sponsor a Campaign

Existing DC flow — set budget and terms

3

Content Gets Created & Approved

Creator produces, restaurant approves, brand reviews for guidelines

4

Donny Amplification Prompt

Donny offers to: repost to brand channels with sponsor copy, create behind-the-scenes story, start tracking engagement.

Repost with sponsor copy

Create BTS story

Track engagement

5

Multi-Channel Performance Tracking

Unified view across all 3 parties — restaurant, creator, and brand channels

6

Sponsorship ROI Report

Donny generates cost-per-impression, reach, "sponsor again?" recommendation

Brand Multiplier Effect

Feature Grid

SECTION 7

Donny AI: The Social Media Brain

Architecture

6 Core Capabilities

Create

Write captions, select hashtags, format per platform

Schedule

Pick optimal posting times, queue content

Publish

Post to multiple platforms simultaneously

Analyze

Pull engagement stats, track growth, identify trends

Engage

Read comments, draft replies, detect mentions

Manage

Upload media, list accounts, manage connections

Example Commands

Restaurant Commands

- › “Donny, post our new salmon roll photo to Instagram and Google Business with today’s lunch special pricing”
- › “Donny, schedule a week of posts using the content from our last 3 campaigns”
- › “Donny, what’s our best performing post this month?”
- › “Donny, reply to the Google reviews from this week”

Creator Commands

- › “Donny, cross-post that approved reel to my TikTok and Instagram — use my voice, not the restaurant’s”
- › “Donny, what kind of campaign content gets me the most engagement?”
- › “Donny, schedule my behind-the-scenes from the shoot for Thursday at 6pm”
- › “Donny, show me how my follower count has grown since I started on DragonCandy”

Brand Commands

- › “Donny, amplify the Sakura Sushi campaign to our LinkedIn and Instagram with sponsor copy”
- › “Donny, how did our last 5 sponsorships perform across all channels?”
- › “Donny, which campaigns would reach an audience that overlaps with ours?”
- › “Donny, generate a sponsorship ROI report for Q2”

Automation Levels

Manual

Donny suggests, user approves every action.

Best for: new users, sensitive brands

DEFAULT

Assisted

Donny drafts and schedules, user reviews before publish.

Best for: most users

Auto-Pilot

Donny generates, schedules, publishes autonomously. User gets summaries.

Best for: power users, high-volume

SECTION 8

Campaign Lifecycle: Social Media Hooks

Social media integration touches every stage of the campaign lifecycle. At each milestone, Donny can trigger social actions for the relevant parties.

5

Campaign Complete All deliverables fulfilled

Analytics Hook: Aggregate performance across all 3 parties → ROI Dashboard

SECTION 9

Technical Architecture

System Layer Diagram

Key Technical Decisions

Decision	Detail
API Proxy	All Outstand API calls through Supabase Edge Functions — never direct from client
Token Storage	OAuth tokens encrypted with AES-256 in Supabase, following toast_connections pattern
Outstand Auth	Bearer token API key stored as Supabase secret, not exposed to frontend
Social Account Linking	New social_connections table linking profile_id to Outstand social_account_id
Post Records	New social_posts table tracking all posts (post_id, platform, status, analytics)
Analytics Caching	Pull analytics from Outstand periodically, cache in Supabase
White-Label	Outstand white-label mode — no third-party branding visible to users
BYOK Future	Architecture supports Bring Your Own Keys for advanced users

Outstand API Reference

Endpoint	Description
POST /v1/posts	Create and optionally schedule a post
GET /v1/posts	List posts with filtering
GET /v1/posts/{id}	Get post details and analytics
DELETE /v1/posts/{id}	Delete or cancel scheduled post
POST /v1/posts/{id}/comments	Publish a comment/reply
GET /v1/posts/{id}/comments	Retrieve comments
POST /v1/media	Get presigned upload URL
POST /v1/media/{id}/confirm	Confirm upload completion
GET /v1/social-accounts	List connected social accounts
GET /v1/social-accounts/{id}/metrics	Get account-level metrics
POST /v1/social-networks	Initiate OAuth connection
DELETE /v1/social-networks/{id}	Disconnect a social account

Pricing

Item	Cost
Base fee	\$5/month (includes 1,000 posts)
Per-post overage	\$0.01 per additional post
Per connected account	\$0.50/month
Volume discount	Available for 500K+ monthly posts

SECTION 10

Implementation Phases

P1 Restaurant Social Media ~4–5 weeks

Outstand API integration layer

OAuth account connection flow

Donny MCP social tools

Content calendar UI

Post creation & scheduling

Google Business sync

Basic analytics dashboard

Engagement hub (comments)

Foundation: Outstand client, auth storage, Donny MCP — reused by all later phases

P2 Creator Social Media ~3–4 weeks

Creator account connection

Cross-post on content approval

Donny caption rewriter

Creator content calendar

Portfolio analytics (verified)

Verified Creator badge

Growth insights from Donny

Standalone posting

Faster: Reuses Outstand client, OAuth flow, and Donny MCP from Phase 1

P3 Brand Social Media ~3–4 weeks

Brand account connection

Sponsorship amplification

Brand guidelines enforcement

Cross-party analytics

Creator vetting by metrics

Donny sponsorship intelligence

Sponsorship ROI reports

Brand content calendar

Builds on Phase 1–2 infrastructure + adds cross-party analytics layer**P4 Cross-Role & Advanced** ~3–4 weeks

Campaign social hooks (all 5 stages)

Triple-post on content approval

Donny Auto-Pilot mode

UGC detection & reposting

Unified cross-role analytics

Donny weekly content planner

Delegated posting (future-ready)

Performance-based recommendations

The capstone: Ties all three roles together in the campaign lifecycle

Phase 1 Build Order

1a	Outstand API Client & Auth	Backend / Foundation
1b	Donny MCP Integration	AI / Foundation
1c	Account Connection UI	Frontend
1d	Post Creation & Scheduling	Frontend + Backend
1e	Analytics & Engagement	Frontend + Backend

Foundation Reuse: Steps 1a and 1b produce the Outstand client, encrypted token storage, and Donny MCP tools that all subsequent phases (P2, P3, P4) build upon. No rebuild needed — only role-specific configuration and UI.

SECTION 11

Guiding Principles

Donny First, UI Second

Every social action achievable via Donny. Manual UI is fallback. This aligns with the “less typing” philosophy at the core of DragonCandy.

Never Store Secrets Client-Side

Outstand API keys and OAuth tokens stored in Supabase with AES-256 encryption. Edge Functions proxy all calls.

White-Label Everything

Users see “DragonCandy Social” — not “Powered by Outstand.” The integration is invisible to end users.

Build for Reuse

Phase 1 components are role-agnostic. Phases 2–3 configure, not rebuild. Shared foundation, role-specific UX.

Respect Existing Patterns

Follow toast_connections pattern for OAuth. Follow existing Edge Function patterns. Match current codebase conventions.

RLS on Everything

All new social tables follow existing Row Level Security patterns. Users only see their own data. No exceptions.

SECTION 12**2026 Market Context**

Restaurants

- Instagram and Google Business Profile are non-negotiable for local discovery
- 61% of diners say TikTok food content directly influences where they eat
- Short-form video (Reels, TikTok, YouTube Shorts) is highest-engagement format
- Staff-led content (EGC) is emerging as a powerful, underused asset in hospitality

Creators

- Creator economy revenue growing 16.2% YoY to \$20.6 billion in 2026
- Shift toward long-term brand partnerships over one-off sponsorships
- Micro-influencers with local community trust preferred over large national creators
- 92% of consumers trust UGC over traditional brand advertising

Brands

- Focus on 2–3 platforms done well rather than spreading thin
- AI-driven personalization is becoming foundational
- Performance-driven influencer marketing — brands want measurable ROI
- Authenticity and values-driven branding matter more than polish

SECTION 13

Success Metrics

Metric	Target	Measurement Source
Social accounts connected	60% of active users connect 1+ account within 30 days	social_connections table
Posts published through DC	500+ posts/month within 60 days of P1 launch	Outstand API analytics
Campaign content cross-posted	40% of approved deliverables cross-posted	Cross-post prompt acceptance rate
Donny social command usage	70% of social actions via Donny vs manual UI	Analytics events
Brand amplification rate	50% of sponsored content amplified	Sponsorship amplification tracking
Time-to-post reduction	80% reduction from approval to social publish	Timestamp deltas
Creator profile engagement lift	25% increase in application rates for verified creators	Application rate comparison
